NPIC/TSSG/1399-68
6 November 1968

MEMORANDUM FOR: Chairman, Operational Clearance Committee

ATTENTION: Chief, Security Branch, SSD/TSSG/NPIC

SUBJECT: Request for T, KH, and SI Clearances for [redacted]

25X1

1. It is requested that T, KH, and SI clearances be granted to [redacted] (TOP SECRET Clearance granted 9 August 1968, file #542-023, D.O.B. 25 October 1925). [redacted] is the Engineering Vice-President [redacted] and as such, is in charge of the designs and production of virtually all the light tables used at NPIC. In order for [redacted] to design light tables to meet our present and future needs, it is necessary for [redacted] to better understand and appreciate the special problems encountered at NPIC.

25X1

2. At present, [redacted] is building production models of the 940 Split Format Light Table for use in IEC and IAS, and they are designing a new 1540 Split Format Light Table for NPIC under an FY-68 contract. Not knowing the need for certain features, the company has a tendency to underrate and under-engineer these features, thus giving NPIC a less than optimum product. By granting [redacted] the basic NPIC clearances, NPIC will be able to directly communicate with the [redacted] regarding the specialized design features. It is therefore requested that [redacted] be granted the T, KH, and SI clearances.
